Daily Standup - Pay and go! - Mobile Payments App

Participants:

- Basha (Scrum Master)

- Arfath (Mobile Developer)

- Nithish (Backend Developer)

- Rithika (Security Engineer)

- David (UI/UX Designer)

Basha: Hi team, let's get started. What did you do yesterday, what will you do today, and any blockers? Arfath, you're up first.

Arfath: Thanks, Basha. Yesterday, I finished the integration with Phonepe and started working on Google Pay. I hit a bit of a bug with their authentication process, it seems a little different than what the documentation describes. I'll spend some time this morning digging deeper and hopefully get it figured out.

Basha: Thanks Arfath, that sounds good. Nithish, how about you?

Nithish: Yesterday, I made progress on the backend API for handling mobile payments. I finished the core functionality for processing transactions with Phonepe. Today, I'll be integrating that with Arfath's work on mobile and finalizing the API for Google Pay once she clarifies the authentication process.

Basha: Excellent, Nithish. Rithika, any updates on the security side?

Rithika: Absolutely. Yesterday, I reviewed the security protocols for both Phonepe and Google Pay. They seem robust, but I identified a potential vulnerability in our own data integration layer. I'll be working with Nithish today to implement an additional security measure to address this before we move forward.

Basha: Great Rithika. David, how's the UI design coming along?

David: Thanks, Basha. Yesterday, I finalized the mock ups for the mobile payment flow on both iOS and Android. They're looking clean and user-friendly. Today, I'll be working on integrating those mock ups into a working prototype for user testing.

Basha: Perfect, David. User experience is key. Now, any blockers for anyone?

Arfath: Actually Basha, like I mentioned, I'm a bit stuck on the Google Pay authentication process. Their documentation isn't very clear. Perhaps Nithish and I could take a few minutes after this meeting to rectify some solutions?

Basha: Absolutely, Arfath. Collaboration is key. Nithish, can you spare some time to help Arfath out?

Nithish: Sure Basha, Happy to help.

Basha: Great! Sounds like everyone's on track. Let's keep up the good work! Remember, we have a quick demo scheduled for the client tomorrow afternoon, so communication and collaboration are crucial. Don't hesitate to reach out. Meeting adjourned!
